

Facility BMP Manuals – Together We’re Better!

BMP Best Management Practices

GCSAA has made it easy for member superintendents, assistant superintendents, and equipment managers to create a facility BMP manual.

A facility BMP manual:

- Documents the knowledge, skills, and aptitude that are required for the superintendent in that position (other golf course maintenance staff as well).
- Provides documentation, justification and similar support for operational and project budgets, projects, maintenance practices, staff, etc.
- Should be maintained in conjunction with any water quality monitoring, nutrient management and pest management records to document the professional land management practices on their courses.

Participating with facility BMP adoption:

- Helps to support the superintendent profession on local, state, regional and national levels.
- Helps to support the golf course management industry.

Why create a facility BMP manual?
Because Together We’re Better!

BMP Best Management Practices
